

## Molalla Series | Tilt/Turn, Hopper & Picture Window

The Tilt & Turn is an innovative and upscale window opening system. The operation is simple. Rotate the handle in one direction and the window tilts back for ventilation. Rotate the handle the other way, and the entire window pivots in for full ventilation. This feature also lets you clean the outside window pane from the inside. As a result, the Molalla series is ideal for upper story windows in multi-living commercial projects. Also you can limit the opening to Tilt only (Hopper) for ventilation without compromising safety.

These high security windows feature secure internal glazing beads, locking window handles, multi-point locks with claw locks and steel reinforcement to the window frames. The tilt position also aids in security while still enabling ventilation.

### Features:

**Superior Hardware** - We use the best hardware on the market to ensure ease of use and ruggedness for opening and securing the windows for commercial applications.

**Continuous Frame** - Building multi-lite configurations within one frame provides greater design flexibility, structural integrity, and freedom.

**Reinforced Frame & Sash** - Our product line to be designed into taller buildings and commercial applications with higher structural requirements.

Multiple locking points ensure security and provide a triple weather seal for superior air and water resistance.

- Frame Depth: 3 1/2"
- Glazing Capacity: 1 3/8"
- AAMA Rating (NAFS): up to LC-PG55 Baseline
- Thermal Performance: 0.18 (based on simulation)
- STC: up to 40
